Dynamics 365 Business Central

MODULES

Futureproof Your Financials

Create tomorrow

Microsoft Dynamics 365
Business Central

Capability Overview

This summary identifies the key areas of functionality for Dynamics 365 Business Central. Typical to modern Microsoft applications, it is a cloud-based solution accessible anywhere on any device. Microsoft operates a 99.9% SLA on Azure, so all you need is an Internet connection. The solution will fall into Microsoft's monthly update cycle, so it will evolve over time.

For existing Dynamics NAV users, you will see all of the existing capabilities you currently have and will start to see the benefits of being on Dynamics 365 and the extensions available as a result of this. It will be available as an on-premise version as we expect Dynamics NAV 2018 to be renamed to Dynamics 365 Business Central.

Financial management	Account receivables/ payables	Bank reconciliation	Fixed asset management	Month/Year end closing
Sales & service management	Quote generation	Contact management	Sales invoicing	Payment processing
Project management	Capacity planning	Budgets and estimates	Job and process costing	Resource management
Supply chain management	Inventory and Purchasing control	Shipment and distribution	Returns and cancellations	Procurement and vendor management
